

MOORUNGA
ANGUS

5th Annual Bull Sale

3rd September 2026 - 1pm

AuctionsPlus

New Sale Venue
now at
Swanpool VIC

www.moorunga.com

Reference Sires

Banquet Raving R067

Banquet Nutella x

Banquet Wivem N36

The quintessential gentle giant!
Raving is super sound, deep bodied,
clean sheathed, sound footed &
extremely easy doing.

He's had over 140 calves born at
Moorunga & we now have the pleasure
of calving his daughters.
They have a good udder shape & plenty
of milk.

Moorunga Paratrooper T38

Millah Murrah Paratrooper

x Irelands Dream L94

We retained straws in him from our
2023 Bull Sale & we're glad we did!
His progeny are so much like him.
Long, sound, good feet & plenty of
eye appeal.

Brown Double Decker

Hoover No Doubt x

S A V Blackcap May 7888

Double Decker has worked well at
Moorunga. He's breeding moderate
bulls with plenty of muscle as well as
some beautiful, feminine daughters
with awesome
udders.

Buyers Information

Pre-Sale Inspections

This year we'll be hosting two bull viewing days.

Moorunga – 80 Old Moorooduc Rd, Dromana on Friday 7th August – 10am to 3pm.

Lima Park – Our new sale venue: 1853 Midland Hwy, Swanpool on Thursday 27th August – 10am to 3pm

For those unable to attend, inspections are welcome by appointment.

Sale Day - Lima Park - Swanpool

All bulls will be on display from 10am.

Bulls will be sold via live auction at 1pm in the sale ring in conjunction with Auctions Plus.

For those wishing to bid via Auctions Plus, please register at www.auctionsplus.com.au prior to sale day.

Health

All bulls have been tested **Negative for Pestivirus**. (All animals on Moorunga are tested)

Bulls have been vaccinated with **Pestigard, 7in1, Vibrovax, Rhinogard IBR** in accordance with the Immune Ready Guidelines. Moorunga is a J-Bas 6 property. **All bulls have been semen tested prior to sale.**

Moorunga Angus Guarantee

All sale bulls have been DNA tested and Parent Verified (one sire verified only due to the dam's DNA quality).

To the best of our knowledge the bulls on offer are in sound working order at the time of sale. If a bull becomes infertile or breaks down due to reasons other than injury or misadventure, at any time in the 12 months following sale, Moorunga Angus will either:

a: Replace the bull (if a suitable bull is available)

b: Issue a credit (equal to the purchase price less any salvage value of the bull) for use at Moorunga within a 12 month time frame.

Note: In some cases a veterinary certificate may be required. Normal care and good husbandry practices must be observed as a replacement/credit is not available if the bull is injured or dies.

The guarantee covers the purchase price, without interest, costs or damages.

Outside Agent Rebate

A 3% rebate will be paid to outside agents, introducing a new buyer 48hrs prior to sale and settling within 7 days.

Catering

Complementary morning tea and lunch will be available on both the Bull Viewing days & Sale day.

Bull Delivery

Moorunga will assist purchasers in arranging transport. Please leave delivery instructions when signing out. Free delivery by Moorunga is available within 150km of Moorunga or Lima Park. Other delivery assistance is by negotiation.

Please note: No bulls will be loaded until completion of the Auction.

No trailer loading facilities are available.

Insurance

We highly recommend insuring your bull for 12 months from fall of the hammer to cover injury, transit cover & death. All due care will be taken with bulls while being held for delivery but we take no responsibility for injuries incurred during this time. Please talk to an agent on the day.

Safety

All our bull are quiet under normal conditions but care must be taken on sale day as crowd pressure may change their behaviour. They have all been run in a group environment so are not used to being alone.

All visitors enter the bull display area at their own risk. Children are not permitted in the bull display yards. Staff will be available if you would like someone to accompany you through the pens.

Recessive Genetic Conditions

All animals in this sale are free of AM, NH, CA & DD by parentage or testing.

Welcome

Welcome to our 5th Annual Moorunga Bull Sale which this year is being held at our North Eastern Victorian property, Lima Park, Swanpool.

Lima Park a 3300-acre property was purchased last year and is home to our 700 commercial Cow operation showcasing our Moorunga genetics.

The Bulls on offer combine the genetics of our carefully researched and selected females together with some of the world's leading Sires from Australia, New Zealand and North America.

Our bulls on sale are bred to perform and provide superior financial returns for their progeny.

I look forward to seeing you on sale day at our new sale facility at Lima Park. *John Matthies*

Managers Comments

There are always challenges with mother nature and these bulls have again seen plenty.

Plenty of nothing and now, plenty of mud!

Each year is a building process genetically and this year the venue is as well. We have a new sale facility at Lima Park and the bulls will go through the sale ring now as well as the sale being integrated with AuctionsPlus.

We'll be holding a bull viewing day at our home base "Moorunga" on Friday 7th August. The bulls will then be trucked up to "Lima Park", Swanpool. We'll host another viewing day on Thursday 27th August, one week out from sale.

Every year we learn more about what can be done to better splice our genetics together from what we know and adding in what we hope will add to the power of our genetic base. Seeing a lot of our home bred heifers calve down in the last year fills us with pride and the knowledge we are making rapid, positive progress.

There are six bulls just hitting 2yo at sale time, which will give some insight into the growth potential of the younger bulls of similar breeding that are only 16 to 18 months old at sale.

For us the breeding decisions that led to these bulls were made around reproducing from and propagating the progeny of proven lines of cattle that are fundamentally sound and don't involve intervention or additional cost of management, not around theoretical figures or unproven science. Hence a number of the bulls are out of aged females – this can negatively affect the EBV's of these bulls but we're proud of the longevity of our cows and feel that if a cow can still be working at 14yo with no special treatment then her progeny have a much better chance of working hard for us and our clients. **Real cattle that stay in the system!**

We hope you appreciate this draft of bulls, and we look forward to working with past and present clients in the years ahead.

Glenn Trout

The suffix displayed at the end of each animal's name indicates the DNA parentage verification that has been conducted by Angus Australia.

PV : both parents have been verified by DNA

SV : the sire has been verified by DNA

DV : the dam has been verified by DNA

: DNA verification has not been conducted

E : DNA verification has identified that the sire and/or dam may possibly be incorrect, but this cannot be confirmed conclusively.

--	--	--	--

Deep bodied, good sheath as well as his sires' good nature. This combination of pedigree really worked. Edwina M150 is an impressive female & adds frame and eye appeal to her progeny. Her heifer calf from last year is outstanding.

Great feet & sheath, super quiet! We retained straws in his sire & we're really pleased we did. W6 was a single calf born at only 27kg from a soft, deep bodied cow. Check out his great foot data – it comes from both sides of his pedigree.

Another of our Canadian embryos from the Rose family. W32 is a moderate, thick set and stout. If you're looking for extra muscle, check out his butt! We were hoping to get females from these embryos, but the bulls have all turned out to be powerful.

A really gentle big guy with good feet. He's still got a fair bit of growing to do so check out his older full brothers at lots 4 & 5. He'll give you plenty of performance & he only had a moderate birth weight himself. Great fat ebv's.

This is another of the Canadian embryos. These guys are so stout, wide & thick topped! This bull is no exception. We're looking forward to calving down the only heifer we got from the joining as she should have a perfect udder. High growth, carcass & foot data.

Our last Raving son in the sale. This guy is a long, later maturing bull type with great feet. He'll go out and get the job done for you. His dam was a deep bodied female that was still in the herd until 10yo.

BRINGING YOUR NEW BULL HOME

When purchasing a bull, care and handling after the sale can be as important as the purchase itself. Looking after your bull well during the Initial stages of his working life may ensure longevity and success within your breeding herd.

Purchase

At the sale, note any changes of temperament by individual bulls. Some bulls that are quiet in the yard or paddock may not like the pressure and noise of the auction and become excited. Others that were excited beforehand get much worse in the sale ring and can really perform. Use the yard or paddock behaviour as a guide, rather than the temperament shown in the ring.

Delivery

When transporting your new bull insurance against loss in transit, accidental loss of use, or infertility, is worth considering. After purchase tips:

- When purchasing, ask which health treatments he has received.
- Treat and handle him quietly at all times - no dogs, no buzzers. Talk to him and give him time and room.
- If you can arrange it, put a few quiet cows or steers on the truck with the bull. Let them down into a yard with the bulls for a while before loading and after unloading.
- Unload and reload during the trip as little as possible. If necessary, rest with water and feed. Treat bulls kindly your impatience or nervousness is easily transmitted to an animal unfamiliar to you and unsure of his environment.

If you use a professional carrier:

- Make sure the carrier knows which bulls can be mixed together.
- Discuss with the carrier, expected delivery time, truck condition and quiet handling.
- Give ear tag and brand numbers to the carrier and make sure you have the carrier's phone number.
- If buying bulls from interstate, organise any necessary health tests before leaving and work out if any other requirements must be met before cattle can come into another State.

Free delivery by Moorunga

150km from the Swanpool or Dromana properties.
Other assistance by negotiation.

Arrival

When the bull or bulls arrive home, unload them at the yards into a group of house cows, steers or herd cows. Never jump them from the back of a truck directly into a paddock—it may be the last time you see them. Bulls from different origins should be put into separate yards with other cattle for company.

Provide hay and water, then leave them alone until the next morning.

Mating new young bulls

Newly purchased young bulls should not be placed with older herd bulls for multiple-sire joining.

The older, dominant bull will not allow the young bulls to work, and will knock them around while keeping them away from the cows. Use new bulls in either single-sire groups or with young bulls their own age. If a number of young bulls are to be used together, run them together for a few weeks before joining starts. They sort out their pecking order quickly and have few problems later. When the young bulls are working, inspect them regularly and closely.

Managing Older Herd Bulls

Older working bulls also need special care and attention before mating starts. They should be tested or checked every year for physical soundness, testicle tone, and serving capacity or ability. All bulls to be used must be free-moving, active and in good condition. Working bulls may need supplementary feeding before the joining season to bring up condition.

Managing Older Herd Bulls

Check bulls at least twice each week for the first 2 months. Get up close to them and watch each bull walk; check for swellings around the sheath and for lameness.

Have a spare bull or bulls available to replace any that break down. Replace any suspect bull immediately.

Rotate bulls in single-sire groups to make sure that any bull infertility is covered. Single-sire joining works well but it has risks. The bulls must be checked regularly and carefully, or the bulls should be rotated every one or two cycles.

During mating

Check bulls at least twice each week for the first 2 months. Get up close to them and watch each bull walk; check for swellings around the sheath and for lameness.

Have a spare bull or bulls available to replace any that break down. Replace any suspect bull immediately.

Rotate bulls in single-sire groups to make sure that any bull infertility is covered. Single-sire joining works well but it has risks. The bulls must be checked regularly and carefully, or the bulls should be rotated every one or two cycles.
